BARR'S

"Gold Medal"

DAFFODILS

AWARDED

SEVENTEEN GOLD MEDALS and a **TEN GUINEA CHALLENGE CUP**
including **Two Gold Medals Spring 1906**
First-Class Certificates and other highest awards

View of a corner of Barr's Daffodil Nurseries in spring. (*Copyright.*)

BARR & SONS,
11, 12 & 13 King Street, Covent Garden,
LONDON.

NURSERIES:—Surbiton, Surrey (Surbiton Station, S.W.R.).

Visitors invited to see our Magnificent Collections of Daffodils, Tulips, etc., in Spring,
and of Herbaceous Plants and Alpines, and many rare and beautiful Bulbous Plants,
during Summer and Autumn.

Barr's "Gold Medal" Daffodils.

DAFFODILS are the most graceful and beautiful of all Hardy Spring Flowers, and withstand uninjured our severest winters better than any other flower. The cut blooms are always acceptable, and are in abundance out of doors at a season when other flowers are scarce. They supplement and associate admirably with hot-house flowers.

We have been awarded the highest prizes for Daffodils during the Spring of 1906, including the Midland Daffodil Society's GOLD MEDAL on April 25th, and Ten other GOLD and SILVER MEDALS in London and Provinces, also several First-Class Certificates and Awards of Merit for individual varieties.

PRESS NOTICES OF BARR'S DAFFODILS.

Extract from "The Times" of April 26th, 1906.

A SURREY DAFFODIL GARDEN.

"Outside Holland it would be difficult to find a display of daffodils—the most graceful and beautiful of all hardy spring flowers—to equal that which may be seen in MESSRS. BARR & SONS' gardens at Surbiton. The broad stretches of golden-yellow flowers, broken here and there by patches of the deep blue Muscari and hyacinths and tulips of many tints, make up a charming scene; and lovers of flowers will find, in addition to the floral picture, a great deal to interest them in MESSRS. BARR's methods of treating the various sections and of developing new varieties. The narcissus fields contain a great number of types and species, and in the houses and selected spots devoted to the work of hybridising there are several fine seedlings, most of which are not yet named. At the head of the newest varieties the PETER BARR Narcissus stands first as the *finest white trumpet daffodil in existence*. It is a noble flower of beautiful symmetry and possesses handsome bluish green foliage. PETER BARR was placed on the market in 1903, and even now the growers are asking £30 per bulb; it has been raised from MONARCH and MADAME DE GRAAFF, the latter being a grand and graceful flower whether seen in beds or naturalised in grass. ARIADNE, one of the best of the LEEDSII varieties, is a flower of refined beauty, having a white perianth and a saucer-shaped prettily frilled white cup; and ALICE KNIGHTS is the earliest of white trumpets with a frilled open mouth. IULDA makes a handsome show, the flower grows 18 in. high, measures four inches across, and has a broad white perianth and a large soft primrose trumpet. KING ALFRED, too, is a bloom of large size and great substance, and has an open deeply frilled mouth, the colour being a rich gold. Perhaps the finest of all the POETICUS Narcissi is CASSANDRA, a beautifully shaped flower with a broad clear white perianth and a cup deeply edged with dark red; and KATHERINE SPURRELL may be classed as the most beautiful of the LEEDSII section, having a broad white perianth with a cup of delicate canary colour. These flowers, and many others, like WEARDALE PERFECTION, DUCHESS OF WESTMINSTER, ADMIRAL TOGO, a large flower with a golden trumpet and canary-yellow perianth, and LUCIFER, MARS, and VESUVIUS, of the Incomparabilis section, when seen either in the mass or singly, are pretty and interesting. There are also many delightful specimens among the smaller sorts, such as QUEEN OF SPAIN, which is a soft clear yellow flower with a reflexed perianth. A still smaller flower, also with a reflexed perianth, is NARCISSUS CYCLAMINEUS. This beautiful little daffodil is a rich self-yellow and looks well in pots or on rockwork. And then there is the WHITE HOOP PETTICOAT NARCISSUS, which is valuable for the same purposes. Visitors may wander at will through Messrs. Barr's gardens."

Extract from "The Garden" of April 28th, 1906.

A SURREY BULB FARM.

"In MESSRS. BARR & SONS' NURSERIES AT SURBITON, several acres are planted with Daffodils and Tulips, and at the present time the quarters devoted to these bulbs are masses of rich colouring and delicate greenery, making a spring picture that is worth journeying far to see. Many old favourite Daffodils are grown by the thousand, and it is chiefly to these and the Tulips that the Daffodil nurseries owe their beauty now. We were, however, more interested in the newer and choicer seedlings which are growing in open frames and other more or less sheltered quarters. Undoubtedly the most remarkable Daffodil we saw was PETER BARR, the finest and largest of white trumpets. This variety is most vigorous; one bulb often produces three, and not infrequently four, flowers. LADY JANET JODRELL is a charming Leedsii form with white perianth and cream-white cup. MRS. BETTERIDGE is a small pure white trumpet having a beautifully frilled edge, very free and strong, with bluish foliage. C. H. CURTIS will doubtless become a popular Daffodil; it has a large, bold, canary-yellow trumpet and lighter perianth. BEACON is a charming Burbidgei form, with broad cream-white perianth segments and orange-red cup, a most effective flower. STRONGBOW (Nelsoni), white perianth and rich yellow cup; HON. MRS. JOCELYN, rich yellow Ajax; MRS. GEORGE BARR, a beautiful small white Ajax, the long, narrow trumpet being most distinct. We were shown numerous seedlings yet unnamed in great variety of form and colouring. Among some of the better-known and popular sorts growing in the open fields are GLORIA MUNDI, best of the red-cupped sorts; ARIADNE (Leedsii), remarkable for its broad cup; LORD ROBERTS, a glorified Emperor; LUCIFER, with rich orange cup; VICTORIA, the finest trumpet for forcing; ALICE KNIGHTS, a white trumpet, and one of the very earliest Daffodils to flower; and Leedsii WHITE LADY, one of the freest flowering, five, six, and sometimes seven flowers being produced by one bulb.

"Those who would see all that is best among Daffodils, and in such quantities as to make the nursery a field of flowers, painting the brown land with gorgeous and delicate shades of colour, should go to Surbiton and see several acres of Barr's Daffodils and Tulips."

Extract from "Country Life" of April 28th, 1906.

"A visit to the daffodil grounds of MESSRS. BARR & SONS AT SURBITON at the present moment will be well repaid. This wonderful collection embraces almost every known form of daffodil, from the tiny NARCISSUS CYCLAMINUS to the splendid trumpet hybrid raised in these nurseries, and named after the founder of the firm—PETER BARR. This is one of the highest priced of all daffodils, each bulb realising no less a sum than £30, but it is one of the most distinct of the whole race. The flowers are large without any suggestion of coarseness, and almost white. It is called a white trumpet daffodil, but the colour is not of the same whiteness as, for instance, the Poet's Narcissus of the Swiss upland pastures.

"The many acres at Surbiton seem covered with flowers which glisten in the bright sunlight. . . . This nursery of daffodils forms a pretty April picture, and it is interesting to notice the great variety of form and colour in the flowers—some intense yellow, such as the well-known MAXIMUS, others of the faintest shades, sulphur passing to creamy white. There seems to be no lessening of interest in this beautiful flower of spring, and it is due in a large measure to the firm's enterprise and love for the narcissus that it occupies its proud position in the world of flowers to-day.

"Daffodil time at Surbiton should not be missed. It is one of the most interesting seasons of the year there, and no matter whether the visitor is a daffodil fancier or not, the fields of waving flowers will linger long in memory."

Extract from "The Gardener's Magazine" of April 28th, 1906.

DAFFODILS AT SURBITON.

"Daffodil time at Surbiton is a season toward which many look eagerly for several dreary months, and when it arrives they pay homage to Queen Daffodil at MESSRS. BARR & SONS' SURBITON NURSERIES. The daffodil connoisseur may go to spring shows innumerable, he or she may visit many parks and gardens, but will nevertheless not miss a visit to this famous Surrey bulb farm.

"It is impossible to visit these Nurseries at daffodil time without being astonished at the immense amount of patient labour that has gone to make the improvements we now see, and the wonderful variations of form, colour, and time of flowering that all go to make our gardens beautiful in spring time.

"What a wonderful range of size there is also in daffodils, from the tiny NARCISSUS MINIMUS and N. JUNCIFOLIUS up to such bold varieties as PETER BARR and VAN WAVEREN'S GIANT. In habit, too, there are variations from two or three inches high up to nearly three feet. The colour of the foliage varies from the palest green to the deepest, from grey-green to deep blue-green, and in form from thin rush-like leaves to thick blades an inch across. The flowers show all shades of colour from purest white up to vivid orange-scarlet, though the latter colour is as yet confined to the cup or corona of certain varieties; and it must not be forgotten there is a green daffodil also.

"To the Messrs. Barr & Sons must ever be given the credit for a vast amount of uphill pioneer work both in the introduction of species and raising of new varieties by inter-crossing. But the firm has not rested on its laurels, and each year seedlings of the highest merit are flowered at Surbiton.

"Among the daffodils that stand out as eminently superior to their brethren, PETER BARR, THE KING OF WHITE TRUMPET DAFFODILS, must be first mentioned; it was offered last autumn at forty guineas a bulb. It has a big white flower, of fine form; it has a splendid constitution, and flowers very freely; nearly every bulb in a little colony at Surbiton producing from three to six blooms. C. H. CURTIS is a bold trumpet daffodil with primrose perianth and golden trumpet, and is also a strong grower; it is offered at £18 18s. a bulb. Henri Vilmorin, white; King Alfred, golden-yellow; and Mrs. G. H. Barr, white, are other very fine new things that most of us must wait a few years for.

"New varieties belonging to other sections than that having big trumpets are not less beautiful, and among these few are prettier than the Triandrus-Leedsii cross named AGNES HARVEY; this is a delightful drooping flower of the purest glistening white, save for the faintest tinge of apricot on the cup. BLOOD ORANGE has a vivid orange cup, while GOLDBEY is remarkable for its broad golden cup. JANET IMAGE, finest of the Leedsii forms, and charming MAGGIE MAY, make a splendid pair. The Messrs. Barr are to be congratulated upon their fine new Giant Jonquil (*Odorata rugulosa maximus*), figured in the present issue; it is a splendid variety, fragrant, golden, large, and graceful.

"But while we admire and enjoy the finer, newer, and expensive daffodils, it is out in the fields, where the varieties are massed in their tens of thousands, that the fullest pleasure is felt, for here are daffodils that one may touch, nay, that one may even buy for a modest sum next autumn and consign to the brown earth, in the full assurance that the following spring will bring a harvest of bloom. A Peter Barr, a White Queen, or a Loveliness might cause sleepless nights, but not so such varieties as Sir Watkin, Emperor, Empress, Madame de Graaff, P. R. Barr, Poeticus, Grandee, Horsfieldii, Madame Plomp, Victoria, Queen of Spain, Goliath, Duchess of Westminster, and many others of equal beauty.

"It may perhaps be useful as a guide to those who are at this season inspecting daffodils with a view to planting next autumn, if we give a list of the two dozen varieties that Messrs. Barr & Sons, as a result of long experience, regard as a particularly good collection for general purposes. These varieties are Almira, Ariadne, Bridesmaid, Barrii conspicuus, Beauty, Cassandra, Dorothy E. Wemyss, Duchess of Westminster, Eliza Turk, Emperor, Empress, Gloria Mundi, J. B. M. Camm, Katherine Spurrell, Mabel Cowan, Madame de Graaff, M. J. Berkeley, Mrs. Langtry, Queen of Spain, Ray Smith, Sir Watkin, Stella superba, Vesuvius, and Victoria. This set includes golden and bicolor Ajax varieties, Leedsii, Barrii, Incomparabilis, and Poeticus forms. The most expensive is Ariadne at 5s. 6d. per bulb, and the cheapest is Barrii conspicuus at 30s. per thousand bulbs.

"Besides the daffodils there are many other things worth going to see at Surbiton; the great sheets of Muscari Heavenly Blue are beautiful, the blue colouring surpassing that of the heavens, at least so far as we have seen them lately. Early tulips make great splashes of colour, and the May-flowering varieties are vigorous and promising. The aubricias, violas, polyanthus, fritillarias, anemones, calthas, and other hardy plants of equal interest and beauty are here to be seen in quantity, both in beds and on the rock garden, or by the stream side."

CULTURE AND ADAPTATION OF THE DAFFODIL OUTDOORS.

Soil and its Treatment.—The Daffodil will thrive in any ordinary garden soil, but prefers a deep, rather moist loam. When the soil is of a dry and sandy nature, it should be deeply dug, if possible at least a season before planting the bulbs, well-decayed stable manure being added, and a potato or other vegetable or annual crop grown on the ground. Before the bulbs are planted a sprinkling of quick-lime should be spread on the surface and then dug in. If it is not convenient to first take off a crop of Vegetables or Annuals, then, in digging, give a dressing of lime to the top spit, and work in a little well-decayed stable manure *one foot below the surface*, so as to be out of the reach of the bulbs; the manure is used not as a stimulant but as a sponge to hold moisture in the soil. The ammoniacal properties of manure are injurious to the Daffodil, hence great care is necessary in the use of it. On good retentive loamy soils stable manure is not required, but a dressing of lime may prove beneficial.

FRESHLY DUG SOIL should be allowed to stand vacant two to three weeks before planting, to allow the ground to settle down, otherwise the freshly planted bulbs are sometimes drawn under considerably below their proper depth, and the bloom in consequence is apt to be weakened and retarded the first season.

BEST AND SAFEST MANURE TO USE is Crushed Bones or Basic Slag (*for price see page 37*). This should be applied at planting time, and may be mixed with the soil or placed next the bulbs; the Crushed Bones may be applied at the rate of 4 cwt. to the acre, or $1\frac{1}{2}$ oz. to the square yard, and Basic Slag may be applied in same manner at the rate of 1 ton to the acre, or $7\frac{1}{2}$ oz. to the square yard. We recommend for light soils Crushed Bones (provided they are genuine) in preference to Basic Slag. On very poor and DRY SANDY SOILS we recommend in addition SULPHATE OF POTASH (*for price see page 37*), to be sprinkled annually in the autumn over the surface of the ground, after planting, at the rate of 2 cwt. to the acre, or about $\frac{3}{4}$ oz. to the square yard. The potash not only increases the depth of colour in the flowers, but also helps to hold moisture in the soil, a condition so essential to the perfect development of the Daffodil. We also recommend the use of Phytobroma in autumn and spring (*see particulars, page 37*).

IN EARLY SPRING, as soon as the Daffodils begin to show above ground, the surface soil should be well broken with a hoe, to sweeten it after the heavy winter rains; a handy tool for this purpose will be found offered on page 38. Where practicable it is advisable to cover the ground in November with some light covering material (the idea is to prevent the autumn rains from beating down the crust of the ground, and to break the severity of a sudden frost). We use for this purpose pulled heather; cut furze or gorse, however, answers the same purpose; cut fern or bracken is bad, as it lies too wet; old pea sticks laid across the ground are good, or on flower beds sprays or small branches of cut evergreens stuck into the ground answer the purpose and look decorative; these, of course, need renewing when they get shabby. Do not mulch the beds with manure.

Planting and Lifting.—The best time to plant, to obtain the finest flowers, is during September, *although bulbs may be planted as late as Christmas with fairly satisfactory results*. (We have planted some Daffodils as late as the second week in February, and had some very good blooms the third week in May.) We recommend, however, early planting. The bulbs may be left undisturbed for years in ordinary good loamy soils, but on poor and light soils they are better lifted every two years, as soon as the foliage has died down, and replanted as early as is convenient. Never plant when the ground is wet and sticky; wait until it is dry and friable. Do not put silver sand around the bulbs of Narcissi except in the case of *N. corbularia*.

DEPTH TO PLANT.—The average depth to plant is from 2 to 3 inches, that is to say, a covering of 2 to 3 inches of soil, but not more. As the bulbs vary considerably in size, according to the relative varieties, the best rule to go by is the bulb itself, which should be *covered with soil once and a half its own depth*, measuring the bulb from the collar of its neck to its actual base. On light sandy soils the bulbs may be planted a trifle deeper than on heavy stiff soils, and in the North of England and in cold localities they should be put in a little deeper than in the warmer southern districts.

Position and Grouping for Effect.—All Daffodils prefer partial shade, although most of them will grow equally well in the open. The varieties which are best grown in partial shade are indicated in the following pages by an *. In the flower border, to obtain the best effect, Daffodils should be planted in large groups of irregular outline, each group or clump to contain one variety only; avoid straight lines, circles, and symmetrical designs. Masses of Daffodils should always appear in the Hardy Flower border, where irregular and effective sweeps can be planted between the clumps of herbaceous plants which in their turn grow up and hide as well as shelter the Daffodil foliage while it is going to rest. In grouping Daffodils the season of flowering should be borne in mind, as the varieties bloom in succession from the end of February to the end of May, during which period, by a judicious arrangement, a constant succession of flower is obtainable. *On page 15 we denote the rotation of blooming.*

Naturalising Daffodils in Grass, Etc.—All Daffodils may be planted in grass with perfect success. To produce the best effect, the three groups should be kept separate: thus the Star Narcissi should not be mixed with the Great Trumpets, nor Poet's Narcissi with the Star Narcissi. In arranging, make the breaks large and bold, scattering the bulbs over the ground broadcast with the hand, and planting them where they fall. Avoid symmetrical lines or formal circles as far as possible, as these are never found in nature. In planting under trees, avoid places where the drip from the branches is greatest, also where the main roots of the trees come close to the surface.

VARIETIES SPECIALLY SUITABLE FOR NATURALISING IN WOODLANDS, GRASSLANDS, GLADES, ETC., DELIGHTING IN PARTIAL SHADE.—These are mostly free seeders, and will therefore spread naturally; they are mostly wild plants—*Abcissus*, *Countess of Annesley*, *Golden Spur*, *Henry Irving*, *Obvallaris*, *Spurius*, *Cabeceiras*, *English Lent Lily*, *Princeps*, *Scoticus*, *Albicans*, *Pallidus Præcox*, *Moschatus* of *Haworth* (very pretty in grass), *Johnstoni* *Queen of Spain* (in our opinion the most beautiful of all for this purpose), and all varieties of *Poëticus*. THE VARIETIES UNDERLINED we do not recommend for the cultivated border, as they deteriorate the second year, while in woodlands, grass, or meadowland they flourish.

Naturalising Daffodils in Grass, Etc.—*continued.*

VARIETIES SPECIALLY SUITABLE FOR NATURALISING IN GRASSLANDS, PARKS, ON LAWNS, MEADOWS, ETC.—The following are all very free bloomers, good strong growers, as well as distinctive effective varieties, showing up well from a distance; the flowers are beautiful and valuable for cutting: Emperor, Empress, P. R. Barr, Queen of Spain, W. P. Milner, Horsfieldii, Mrs. Thompson; all handsome trumpet varieties; the following are the best of the chalice-cupped: Incomp. Beauty, Frank Miles, Stella superba, Sir Watkin, Leedsii M. M. de Graaff, Duchess of Brabant, Minnie Hume, Mrs. Langtry and Palmerston, Barrii conspicuus, Flora Wilson, Crown Prince and Siddington, Odorus and O. rugulosus; of the Poets or Dolly-cupped the following are the best: Ellen Barr, Falstaff, John Bain, the early Pheasant's Eye (Poeticus ornatus), and the late Pheasant's Eye (Poeticus of gardens); and of the double-flowered daffodils: The Old Double Yellow (Telamoniulus plenus), Butter and Eggs, Eggs and Bacon, and Codlins and Cream.

FOR LAWNS AND TENNIS COURTS which have to be mown early we recommend the dainty Minimus and Cyclamineus, which make a charming picture. Being very early varieties the grass may be safely mown in May.

VARIETIES SUITABLE FOR PLANTING BY THE WATER SIDE.—Daffodils produce a charming effect when growing at the water's edge. The following varieties we can strongly recommend for this purpose—*Odorus* and *Odorus rugulosus*, with their rush-like foliage and graceful golden flowers; *Duchess of Westminster*, *John Bain*, and the old late *Pheasant's Eye Narcissus* (*Poeticus*), with their graceful starry flowers; *Emperor*, *P. R. Barr*, and *Empress*, three noble trumpeters; *Sir Watkin*, *Barrii conspicuus*, *Stella superba*, *Beauty*, *Frank Miles*, and the *Double White Poeticus* or *Gardenia-flowered Narcissus*, etc. In choice spots near the water's edge the charming little *Cyclamineus* should be planted, as also the sulphur-coloured Hoop Petticoat *Narcissus* (*N. Bulbocodium citrinum*), both of which luxuriate in moist grassland.

METHOD OF PLANTING DAFFODILS IN GRASS.—We recommend for this work our SPECIAL BULB PLANTER (see illustration, page 38). By the use of this implement the trouble of planting bulbs in grass is reduced to a minimum. It takes out a clean, circular piece of turf 2 inches in diameter, and of sufficient depth. On making the second hole this piece of turf is released from the planter and lies ready on the ground to cover the bulb with. The soil is not in any way tightly pressed and made hard, which is the case when an ordinary dibber is used, and the appearance of the grass is not spoilt; in fact, after planting 10,000 bulbs with this tool on a greensward, one could not detect that the grass had been touched. If the ground is very poor and thin, a compost of fresh soil with an abundance of *Crushed Bones* (7 lbs. to a bushel) should be made and dropped into each hole before placing in the bulb, a little more should be given as a covering, and then the sod of turf be replaced and pressed down. The bulbs will then be given a fair start in their new quarters. (For price of Barr's Special Bulb Planter, see page 38.)

THE BEST TIME FOR PLANTING IN GRASS is with the advent of the autumn rains, when the ground is in a fairly moist condition, it being impossible to plant whilst the ground is hard and solid from the summer heat; moreover, nothing is gained by planting in hot dry ground, to say nothing of the cost and labour of planting.

ON CUTTING DAFFODILS FOR DECORATION.

To obtain very fine blooms Daffodils should be cut in a young state, just when the bud is bursting. Place in water and allow the flowers to expand in a cool greenhouse or sitting room. The blooms opened in this way are larger and purer in texture and of better colour than those which develop out of doors.

CULTURE OF DAFFODILS IN POTS OR BOXES.

TIME OF POTTING.—Pot as early in autumn as possible to obtain the finest results and earliest blooms.

THE BEST COMPOST to pot Daffodils in is a mixture of two-thirds good fibrous loam (which should be pulled to pieces by the hand and not passed through a sieve, so as to retain in the soil as much old root fibre as possible), and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding 1½ lbs. of bone meal or Phytobroma (see page 37) to every bushel of soil, which mix well together before using. *Never pot in soil that is wet or sticky.* Barr's Fertilised Fibre and Charcoal may also be used; it is light and cleanly to handle, and is a suitable medium for growing all kinds of spring-flowering bulbs in pots or vases, either for indoor decoration or for cutting. (See page 37.)

THE POTS should be carefully washed or wiped clean before using. *Never pot in dirty or wet pots.*

GOOD DRAINAGE should be secured by placing three or more pieces of broken crocks over the hole, placing the crocks with bevelled sides uppermost, then cover crocks with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with crocks, a good layer of rough fibrous loam placed at bottom of box, or a layer of leaf soil to ensure perfect drainage.

IN POTTING, the larger bulbs should be two-thirds covered with soil and the pots filled to within half an inch of the rim to allow of watering when in growth. The small bulbs of the miniature species should be covered with half an inch of soil.

AFTER POTTING, stand the pots or boxes outside in the open, under a north wall by preference, on a firm bottom such as a bed of ashes or gravel path to prevent the entrance of worms. The pots should be plunged bodily in Cocoa Fibre, ashes, or old decayed leaf soil, filling in the covering material in between the pots, which should be completely buried to a depth of 4 inches. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots are plunged in the open they will require no watering.

THE POTS OR BOXES SHOULD REMAIN PLUNGED for a period of not less than twelve weeks, after which portions may be removed indoors in succession, selecting first those which bloom naturally early. Place first in a cold frame, cool greenhouse, or cold sitting-room free from draughts, close to the glass. Very weak liquid manure-water may then be given once a week until they come into bloom.

Culture of Daffodils in Pots or Boxes—continued.

Those that are wanted in bloom early may, after the flower buds are advanced, be placed in a warmer temperature, such as a slow forcing-house, but this should never exceed 65° if really fine blooms are desired. The plants should always be kept as near to the glass as possible and not allowed to get drawn, from an insufficient supply of light or air. *On no account should bottom heat be given in forcing Daffodils.*

Of the stronger growing sorts use three to six bulbs, according to size of bulb, for a pot measuring 4½ to 6 inches in diameter; of the small miniature kinds, such as *N. Minimus*, *Nanus*, *Minor*, *Cyclamineus*, *Triandrus*, *Juncifolius*, and *Corbularias*, use twelve to eighteen bulbs for a 4½ to 6-inch pot. These small-flowered dwarf-growing species are most charming in pots or little shallow pans. The following may easily be had in bloom in January:—*N. Minimus*, *Minor*, *Nanus*, and *Cyclamineus*, and these may be mingled with *Chionodoxas*, as both bloom at the same period and produce a charming contrast. The *White Hoop Petticoat* *Narcissus* should be potted in almost pure sand kept well moist, and if placed at once in a cold frame after potting may be had in bloom by Christmas. (*See Rock Garden Collections of Miniature Daffodils, page 8.*)

If Daffodils are wanted in quantity for cutting early in the season, plant thickly in boxes, giving same culture as recommended above for growing in pots. Of the best varieties to grow for early forcing in boxes, the following command a first place: *First early sorts*—*Queen of Spain*, *Henry Irving*, *Golden Spur*, *Sir Watkin*, *Old Double Yellow Daffodil*; *Second early sorts*—*Emperor*, *Empress*, *Horsfieldii*, *P. R. Barr*, *Barrii conspicuus*, *Incomparabilis Beauty*, and *Stella superba*. All the miniature Daffodils make charming pot plants, especially the following: *N. Minimus*, *N. Cyclamineus*, *N. Triandrus albus* (*Angel's Tears*), and *N. Juncifolius*.

⚠ All Daffodils may be grown in pots, but in the following pages we have indicated thus † those kinds which are best for this purpose.

CULTURE OF DAFFODILS IN VASES AND BOWLS.

A charming effect can be obtained by growing Daffodils in fancy vases or bowls, with or without drainage, by simply using our specially prepared Fertilised Fibre and Charcoal Mixture (3s. 6d. per bushel, 1s. per peck); the mixture is light, clean, and nice to handle, and *remains sweet* (an important matter where the vases used have no drainage holes); indeed, it is in every way superior to potting soil for growing Daffodils and other bulbs in fancy bowls and vases.

Three bulbs of *N. Queen of Spain* growing in Barr's Fertilised Fibre in a 4-inch "Doulton-ware" Vase, without drainage hole.

in our Fertilised Fibre and Charcoal Mixture. The vases are of elegant shape, of a neutral art drab shade, and without drainage holes, thus saving the use of saucers. They will be found most useful for growing not only Daffodils in, but also Tulips, Hyacinths, Snowdrops, and *Chionodoxas*, also the charming winter-flowering *Iris*—*reticulata*, etc., either for table decoration or the greenhouse. During summer they may be used for table decoration planted with Pansies and such low-growing hardy flowers, or for standing little pot-plants in. All Daffodils that may be grown in pots may also be grown in these fancy bowls, and in the following pages we have indicated thus † those kinds that are best for this purpose.

Barr's "Doulton-Ware" Bulb Vases (as illustrated):—2½ in. diameter, -/9; 4 in. dia., 1/3; 5½ in. dia., 2/-; 7 in. dia., 3/- each.

Fancy Decorated Japanese Bowls:—5 in. diameter, -/10; 6 in. dia., 1/3; 7 in. dia., 1/9; 8½ in. dia., 3/-; 9½ in. dia., 4/-; 10½ in. dia., 6/-; 12 in. dia., 8/6 each.

Barr's Fertilised Fibre and Charcoal Mixture, for growing bulbs in Vases, Bowls, Jardinets, etc., 3s. 6d. per bushel; 1s. per peck (bags free).

Culture.—Fill the vase or bowl with the Fibre and Charcoal Mixture, and plant the bulbs in the same manner as with ordinary potting soil; the larger bulbs should be about half covered, the small miniature growing varieties only just covered. When potting, fill the vase with the mixture up to a little below the rim, so as to allow sufficient space for watering. Pot firmly. After potting, give sufficient water to make the whole moderately damp. The vases may be then either placed in a cold frame and plunged in cocoa fibre, where they may remain twelve weeks, or they may be placed in a dark cupboard or cool airy cellar until they have made 4 to 6 inches of top growth, when place in the window of a cool airy sitting-room or in a cool greenhouse close to the glass, where they may be flowered in the same way as pot Hyacinths, except that they should always be kept as near to the glass as possible, and given sufficient light and air to prevent the foliage from becoming drawn. When the flower buds are advanced, they may be removed to a warmer temperature, such as a slow forcing-house or warmer sitting-room, still being given as much light as possible. No bottom heat must ever be given, neither should they be placed in too warm a temperature until the flower buds are well developed. Once they have started to make good growth, the mixture should be kept moist, but water must be given sparingly until the bulbs have made at least 6 inches of top growth.

SPECIAL FANCY VASES AND BOWLS for growing Daffodils, etc., in.

We have had special little fancy vases made for us by Messrs. Doulton for growing Daffodils and other spring bulbs

Barr's 42/- Collection of Daffodils for Pot Culture, for Greenhouse and Indoor Decoration.

For Special Cultural Directions see pages 4 and 5.

The following Daffodils may be gently forced for early bloom during winter and early spring months, and if after flowering they are turned out of pots and carefully planted out (the ground being well watered previously, should it be dry) they will mostly bloom well outdoors the following season :

All strongest selected bulbs.

6 Emperor	6 Bicolor J. B. M. Camm	6 Incomparabilis	6 Leedsii M. M. de Graaff
6 Glory of Leiden	6 " Victoria	6 Stella superba	6 Barrii conspicuus

BIFLORUS, The Primrose Peerless Daffodil. (See page 34.)per 100, 2/9; per 1000, 25/-

 For Inexpensive Mixtures of Daffodils for naturalising and large plantings, see page 8.

Barr's Inexpensive Mixtures of Daffodils.

To Naturalise in Shrubberies, Orchards, on Grassy Slopes, etc., and for cutting.

Single Trumpet Daffodils, Mixed, including *Princeps*, *Queen of Spain*, *Abscissus*, *Rugilobus*, *Spurius*, etc., etc., for naturalisationper 1000, 37/6; per 100, 4/-

Single Chalice-cup or Star Narcissi, Mixed (*Incomparabilis*, *Leedsii*, and *Barrii* varieties), for naturalisation in grass, etc. The grand effect of these light graceful Daffodils, when naturalised, must be seen to be realised. Their value as cut flowers for bouquets and vases cannot be over-estimated.....per 1000, 32/6; per 100, 3/6

Single Dolly-cup or Poet's Narcissi, in Mixture, comprising varieties of *Burbidgei* and early *Poeticus*, for naturalisation in grass, etc. For cutting, the flowers are greatly prized. Of these Dolly-cup Narcissi Mr. William Robinson writes, referring to Gravetye: "Five years ago I cleared a little valley of various fenees. Through this runs a streamlet, and we grouped the Poet's Narcissi near it, and in a little orchard that lay near, and through a grove of oaks. This year the whole landscape was a picture, such as one might see in an Alpine valley."per 1000, 35/-; per 100, 3/9

Splendid Mixed Daffodils of Many Sorts, for naturalisation, including Trumpet, Chalice-cup, and Dolly-cup or Poet's Narcissi, a special mixture of Daffodils of all kinds suitable for large plantings in Grass, Woodlands, etc.per 1000, 25/-; per 100, 2/9

For extra choice Mixtures for the Flower Border, see page 6.

Miniature Daffodils for the "Rock Garden."

The following are charming little subjects for rockwork, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and, if happy, will soon establish themselves and afford a lovely picture in early spring. All the *Corbularias* (except *Corbularia monophylla*) like moisture, and should therefore be planted at the foot of the rockery. *Cyclamineus* also likes moisture and partial shade. *Corbularia monophylla* flourishes in a warm dry sheltered situation, and should be given a hot sunny nook, planted in almost pure sand; when coming into bloom give water freely. *Triandrus albus* (*Angel's Tears*) and *Juncifolius* delight in partial shade and a light gritty soil, and should be given a well-drained position such as a sloping bank. In the case of these slender dwarf-growing Miniature Daffodils, the ground may be carpeted with close-growing surface rooting plants, such as *Arenaria caespitosa*, *Thymus serpyllum* vars., *T. lanuginosus*, *Herntaria glabra*, *Mossy Saxifragas*, etc.; these plants provide a natural protection for these little bulbs, besides keeping their dainty blooms from being splashed and soiled in rainy weather. We prefer, however, seeing these little gems peeping out of grass, and where special banks are made or reserved for them we can supply seed of suitable fine dwarf grasses for sowing in September after planting the bulbs; this sowing will give a fine green carpet by the following spring when the Narcissi bloom.

Full descriptions of the following Miniature Daffodils will be found in body of Catalogue.

NARCISSUS KING ALFRED.

A remarkably handsome Daffodil, flowers of large size, great substance, and refined finish; colour a uniform intense rich golden; trumpet large and of elegant form, with open deeply frilled mouth; very tall vigorous grower and free bloomer; foliage of a handsome bluish shade, ht. 24 in. FIRST-CLASS CERTIFICATE, R.H.S., AWARD OF MERIT, ROYAL BOTANIC SOCIETY, and the PREMIER PRIZE of the MIDLAND DAFFODIL SOCIETY, April 18th, 1905. (See page 13.)

Reproduced from a Photograph. (Copyright.)

NARCISSUS ALICE KNIGHTS.

Raised at our Surbiton Nurseries.

THE EARLIEST OF WHITE TRUMPET DAFFODILS and a beautiful flower; perianth white, trumpet creamy white of elegant form with prettily filled open mouth; the whole flower is of great substance and lasts well, whether cut or on the plant; of good constitution and a free bloomer, ht. 12 in. AWARD OF MERIT, R.H.S., April 11th, 1905, and CERTIFICATE OF MERIT, R.H.S., March 21st, 1906. (*see page 11.*)

Barr's New Seedling Daffodils for 1906,

Including several which are offered for the first time.

The following list of Daffodils includes the best of the new seedlings recently raised by ourselves and others, and purchasers cannot fail to be pleased with them. In point of quality they all rank high, while a robust healthy constitution renders them additionally valuable. They will well repay a good culture by the size and beauty of their flowers.

Where we have a record, we give in inches the heights as registered at our Surbiton Nurseries.

The relative qualities as we judge them we have indicated by xx, xxx, xxxx, xxxxx, the highest quality flower being given the most marks. The figures after the names indicate the relative period of flowering, (1) being earliest, (5) being latest.

PETER BARR,

The King of White Trumpet Daffodils.

RAISED AT OUR SURBITON NURSERIES.

Awarded First-Class Certificate by the Royal Horticultural Society, April 8th, 1902. First-Class Certificate, Cornwall Daffodil Society, March 31st, 1903. Awards of Merit by the Devon Daffodil Society, April 12th, 1904, the Royal Botanic Society of London, April 13th, 1904, and at Huntingdon, April 19th, 1906.

This is without doubt the King of White Trumpet Daffodils. The flower is large and bold, of beautiful symmetry and fine substance, with pure white campanulate perianth and large handsome white trumpet of elegant outline. It is a strong grower and free bloomer, with handsome deep bluish green foliage, ht. 16 in. *See Illustration on back cover.* £30 each.

Extract from "Gardener's Chronicle," May 3rd, 1902.—"Peter Barr is not the only white Ajax or large trumpet variety that has been raised, but it is certainly the best and *much the best*. . . . In colour the flower is described as white, but it must be understood that by this is not meant the pure white which is seen in *Narcissus poeticus*. No trumpet Daffodil is yet so pure, but Peter Barr is the very palest sulphur-white, the perianth being a shade purer than the trumpet, and the whole whiter than any existing Ajax variety. It is said to have been raised from Monarch and Madame De Graaff, and will be a fitting memorial of a man whose life has been spent in developing and popularising the Daffodil. It blooms a day or two later than mid-season."

AGNES HARVEY (Leedsii) (4), xxxxx, new 1902, a beautiful new seedling, having <i>Triandrus</i> blood in it, perianth pure white, cup of exquisite form, pure white sometimes flushed soft apricot, one to three blooms on a stem, slightly drooping, very beautiful, ht. 13 in. Award of Merit R.H.S., 1902, Plymouth, April 12th, 1904, and R.B.S., April 18th, 1906	each.
ALICE KNIGHTS (Trumpet Daffodil) (1), xxxx, raised at our Surbiton Nurseries, the earliest of white Trumpet Daffodils and a beautiful flower; perianth white, trumpet creamy white of elegant form with prettily frilled open mouth; the whole flower is of great substance and lasts well, whether cut or on the plant; of good constitution and a free bloomer, ht. 12 in. Award of Merit R.H.S., April 11th, 1905, and R.B.S., March 21st, 1906. (<i>See Illustration, page 10</i>)	£ s. d. 1 1 0

Awarded First-Class Certificate R.H.S.	3	3	0

General List of Barr's Daffodils.

For Alphabetical List of all the Varieties offered in this Catalogue, see General Index, page 2 of Cover.

The following list of Daffodils embraces the highest class and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. They represent the cream of our Collection (over 500 kinds), and the best of the newest varieties in commerce up to 1906, several being offered to the public for the first time this season. During the past few years we have rejected many of the older kinds which we considered had been superseded by better sorts at equally moderate prices.

TIME OF FLOWERING, HEIGHT, Etc.

The relative period of flowering of the different varieties and species out of doors we have denoted by means of numbers after the names, thus :

- (1) **1st early**, flowering from February to early March.
- (2) **2nd early**, flowering in March.
- (3) **Varieties flowering in mid-season**, or early in April
- (4) **Late-flowering** varieties, from middle to end of April.
- (5) **Very late-flowering** varieties, opening in May.

The actual period of blooming depends upon the season and district ; thus in early districts (1) would commence in January and early February, while in colder districts end of February or beginning of March ; but the natural rotation would remain the same.

Height.—In most cases we give also the heights in inches as recorded at our nurseries.

Quality of Flower.—Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety. This we indicate by x, xx, xxx, xxxx, and xxxxx, giving the most marks to those we judge to be the finest. The result we have added to this catalogue, trusting it may be found a useful record to amateurs. *Varieties which we consider to be superseded by better sorts, or which we have found to have a poor constitution, we have omitted from the body of our Catalogue.*

* The varieties marked thus * thrive best under the shade of deciduous trees, naturalised in grass in shady nooks, or on grassy slopes facing north.

† indicates those kinds which should be selected where Daffodils are grown in pots ; they are, however, also good border varieties.

§ indicates those Daffodils which, besides being fine border plants, make a pretty effect when naturalised in grass ; they are all strong growers and free bloomers.

Daffodils omitted from our General List in favour of better sorts of similar character are offered at reduced prices on page 37.

GROUP I.—MAGNI-CORONATI.

LARGE CROWNED OR TRUMPET DAFFODILS, including the species *Cyclamineus* and *Hoop Petticoat Daffodils* (*Bulbocodium* or *Corbularia*), also the hybrids *Johnstoni*, *Backhousei*, *Tridymus*, and *Humei*.

DISINGUISHING CHARACTER.—TUBE OF FLOWER AS BROAD AS IT IS LONG AND THE CROWN OR TRUMPET MORE THAN THREE-QUARTERS AS LONG OR LONGER THAN THE PERIANTH SEGMENTS OR PETALS.

YELLOW TRUMPET DAFFODILS.

Varieties with Yellow or Primrose-coloured Trumpet and perianth of same shade or lighter (not white).

WHITE TRUMPET DAFFODILS.

Silvery White and Pale Cream-Coloured Varieties.

Most of the Daffodils in this section thrive best in fibrous virgin loam, mixed with well-decayed leaf-soil; generally speaking they dislike manure; where, however, the soil is very poor, bone-meal or basic slag may be used (for full directions, see page 3). The varieties marked thus * thrive best in the shade of deciduous trees, naturalised in shady grassy nooks, or on grassy slopes facing north.

NARCISSUS JOHNSTONI.

Natural Hybrid of Ajax x Triandrus, with reflexing perianth, and tube longer than it is wide.

NARCISSUS JOHNSTONI QUEEN OF SPAIN
(About two-thirds natural size).

‡† **QUEEN OF SPAIN** (2), xxxx, found by Mr. Peter Barr in Spain. One of the most beautiful, distinct, and graceful Daffodils in cultivation, and unsurpassed either for bedding, pot or vase culture, or for naturalising in woodlands, etc. The flowers vary slightly in size, but all are of a uniform soft, delicate, clear yellow, with a gracefully reflexing perianth, trumpet of distinct and elegant form, ht. 12 in. Naturalised in grass under trees, this Daffodil forms a delightful feature in the garden. It also adapts itself readily to bowl culture in cocoanut fibre and charcoal, or damp pebbles and gravel, and grown thus affords an artistic decoration for the sitting-room. Awarded FLORAL CERTIFICATE at the Daffodil Conference, 1896. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the foliage is still green, there is a possibility that all the bulbs may not bloom the first season, but a good proportion will.

GROUP II.—MEDIO-CORONATI.

Chalice-Cupped Daffodils or Star Narcissi, Etc.

EXAMPLE OF A FLOWER IN GROUP II.

(*QUELTIA*, *PHILOGYNE*, *GANYMEDES*, ETC., OF SALISBURY, HAWORTH, AND HERBERT; *PEERLESS*, *NONSUCH*, ETC., OF PARKINSON.)

The varieties of this group are hybrids, excepting *Triandrus* and *Juncifolius*, which are species. *Incomparabilis* and *Barrii* are the result of garden crosses between yellow Trumpet Daffodils and *Narcissus Poëticus*; *Leedsii*, a garden cross between White Trumpet Daffodils and *Poëticus*; *Nelsoni*, the result of a Trumpet Bicolor var. crossed with *Poëticus*; *Bernardi*, a natural cross between *Abscissus* and *Variiformis* (Trumpet Daffodils) and *Poëticus*; *Maclearii*, an ancient hybrid, origin unknown, but it may be a cross between a Trumpet Bicolor and a *Tazetta* or *Polyanthus Narcissus*; *Odorus*, an ancient hybrid between a Trumpet Daffodil and *Narcissus Jonquilla*.

The varieties in this group commence flowering in March, and furnish a succession till May. They are all of elegant beauty, and as cut flowers are extensively used for furnishing vases and table bouquets. For this purpose they should be grown in quantity in boxes and forced for early bloom (see page 4).

NARCISSUS INCOMPARABILIS.

DISTINGUISHING CHARACTER.—Depth of crown or cup more than one-third and up to three-quarters the length of the perianth segments (petals).

All these make charming pot-plants, while the cut flowers are of great value in decoration. For beds and borders they are very showy, and naturalised in grass few flowers are so graceful and effective. It is well to bear in mind that the depth of colouring in the cup varies according to season.

NARCISSUS LEEDSII.

The Silver-White Fragrant Star, or Eucharis-flowered Narcissi.

Comprising the white and sulphur-cupped Incomparabills and Barril forms, all with pure white perianth segments (petals).

These chaste and beautiful Daffodils are highly prized for indoor decoration, while to cut for bouquets their fragrant flowers are greatly in demand. Plant 3 or 5 bulbs in a 5-inch pot. In flower beds and borders they are most charming, while naturalised in grass they resemble a multitude of silvery white stars.

NARCISSUS TRIANDRUS (*syn. Ganymedes*).

The White Cyclamen-flowered Daffodil, with reflexing perianth.

TRIANDRUS CALATHINUS
(Less than half natural size).

THE DAINY LITTLE "ANGEL'S TEARS" DAFFODIL (*Triandrus albus*) was found by our Mr. Peter Barr on the mountains of Portugal and Spain, growing in very hard, firm, fine gritty soil, sometimes in the narrowest fissures of granite and slate-stone rocks. All in this section make lovely little pot plants, and grown thus should be given cold frame culture. Established on rockwork they form a picture full of grace and beauty. They prefer shade, a gritty soil, and well-drained position.

ALBUS (3), xxxx, an exquisitely beautiful little flower, appropriately called the "Angel's Tears" Daffodil, the flowers are creamy white and are variable in size, perianth elegantly reflexed, ht. 7 in. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the foliage is still green, a proportion may possibly not bloom the first season. The bulbs should therefore be left undisturbed to establish themselves per 1000, 60/-; per 100, 6/6

GROUP III.—PARVI-CORONATI.

Dolly-Cup or Poet's Narcissi.

DISTINGUISHING CHARACTER—DEPTH OF CUP LESS THAN ONE-QUARTER THE LENGTH OF THE PERIANTH SEGMENTS (PETALS).

EXAMPLE OF A FLOWER IN GROUP III.

In this section, *Poëticus* (the true Poet's Daffodil) is the flower popularly called the **Narcissus**; *Burbidgei* is a hybrid between *Incomparabilis* and *Poëticus*, and is the connecting link between Groups II. and III., *Biflorus* is Parkinson's Primrose-Peerless, a hybrid of *Tazetta* and *Poëticus*; *Gracilis* and *Tenuior* are the *Helena* of Haworth; *Jonquil* the *Jonquilla* of Linnaeus; *Polyanthus Narcissus* the *Hermione* of Haworth and *Tazetta* of Sibthorp.

NARCISSUS BURBIDGEI.

Hybrid Poet's Narcissi, or Dolly-Cup Daffodils.

These with their light and graceful habit and beautiful blossoms are much valued as pot plants (3 to 6 in a pot), and for vases, bouquets, and buttonholes; in beds and borders they are specially attractive, while naturalised in grass few plants are so beautiful.

The *Burbidgei* Narcissi differ from *N. Poëticus* in the cup of the flower being generally a trifle longer and not so flat; the early forms commence flowering before *Poëticus ornatus*, and continue flowering in succession, one variety after another, from March to the middle of May.

		per doz.	each.

NARCISSUS POËTICUS.

The true Narcissus or "Poet's Daffodils." These all have snowy white perianth segments (or petals), with a flattened cup, cinnabar-red or edged with cinnabar-red.

The earlier flowering varieties afford a very beautiful decoration indoors when grown in pots (5 bulbs in a pot) or forced, while as border plants and for naturalising in grass they are all of the greatest value.

Referring to the great beauty of these Poet's Daffodils when naturalised, Mr. William Robinson writes: "Four years ago I cleared a little valley of various fences. Through this runs a streamlet, and we grouped the Poet's Narcissi near it, also in a little orchard that lay near, and through a grove of oaks. This year the whole landscape was a picture such as one might see in an Alpine valley."

☛ Early planting and liberal culture is specially recommended for these Poet's Daffodils.

NARCISSUS POETAZ.

New Hybrids of Narcissus Poeticus × Polyanthus Narcissi.

A fine new race of Daffodils, resulting from a cross between *Poeticus ornatus* and the finest varieties of *Polyanthus* or *Bunch-flowered Narcissi*, the Poeticus being the seed-bearing parent. The plants are tall, vigorous growers, and bear a head of 3 to 4 large well-formed flowers, deliciously fragrant. In pots or the flower border they are very decorative, while the flowers are highly prized for cutting.

For the Large-flowered Dutch Varieties of *Narcissus Tazetta* (Bunch-flowered *Narcissi* or *Nosegay Daffodils*), SEE GENERAL BULB CATALOGUE.

DAFFODILS OMITTED FROM OUR GENERAL LIST

as being now superseded by better sorts and offered at Reduced Prices.

The following Daffodils we are rejecting either in consequence of their having a weak constitution and therefore being unsuitable to general culture, or because we consider that they have been superseded by finer varieties at equally reasonable prices. We have therefore omitted them from our general list, and are offering them below at greatly reduced prices.

MANURES, SOILS, FIBRE, VASES & BOWLS FOR DAFFODILS.

Basic Slag, best quality, per cwt. 10/6; per 7 lbs. 1/- (*bags free*).

Bone Meal (*Genuine Crushed Bones*), best quality, per cwt. 14/-; per 7 lbs. 1/3 (*bags free*).

Sulphate of Potash, finest quality, per cwt. 21/-; per 7 lbs. 1/9 (*bags free*).

Barr's Phytobroma, for Daffodils, Hyacinths, Tulips, etc. We can confidently recommend this as a safe general manure; it should be mixed with the soil *before* the bulbs at planting time at the rate of 4 cwt. to the acre, or 1½ oz. to the square yard, and in spring, when the bulbs are showing above ground, a top-dressing may be given—using the same quantities.

For Pots, mix *Phytobroma* with the soil, to be used at the rate of 1 lb. to the bushel, and in spring, when growth is showing, top dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lbs. 2/6; 14 lbs. 4/6; 28 lbs. 7/6; 56 lbs. 12/6; 1 cwt. 20/- (*bags free*).

Barr's Special Mixed Potting Soil, 2/6 per bushel (*bags free*).

Barr's Specially Prepared Fertilised Fibre and Charcoal Mixture, for growing bulbs in vases, bowls, jardinetts, etc. (*see page 5*). 3/6 per bushel; 1/- per peck (*bags free*).

Small Pebbles and Charcoal, 6d. per quart; 3/6 per peck.

Barr's Special Doulton Ware Bulb Vases (without drainage hole), suitable for growing Daffodils, etc., in. :—2½ in. diameter, -/9; 4 in. dia. 1/3; 5½ in. dia. 2/-; 7 in. dia. 3/- each.

Fancy Decorated Japanese Bowls (without drainage hole):—5 in. diameter, -/10; 6 in. dia. 1/3; 7 in. dia. 1/9; 8½ in. dia. 3/-; 9½ in. dia. 4/-; 10½ in. dia. 6/-; 12 in. dia. 8/6 each.

For Wooden Labels and other Garden Requisites, see **BARR'S SEED GUIDE**. Free on application.

USEFUL TOOLS FOR BULB PLANTING, Etc.

Barr's Special Bulb Planter (Regd. 368338), specially designed for planting Daffodils, etc., in grass. At every operation it lifts a clean circular little sod of grass which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have been put in. A time must be chosen for planting when the ground has become softened after early autumn rains

Rd. 368338.

BARR'S BULB PLANTER.

and not when in a hard and baked condition, as it is then impossible to use this or indeed any other tool with success. By the use of BARR'S SPECIAL BULB PLANTER a large quantity of bulbs may be planted in a very short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about 3½ lbs. The cup is manufactured from high-class hardened steel and consequently always carries a keen cutting edge.

Supplied in 3 sizes of cup:—To cut out a circular hole 2 inches diameter.

"	"	"	2¼"	"	"	} 10/6 each.
"	"	"	2½"	"	"	
"	"	"	2¾"	"	"	

We shall send the medium size (2½ in.) if no instructions to the contrary are given.

Barr's Special Bulb Dibber (Regd. 468878), specially designed for dibbling bulbs into borders, etc.; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about 6¾ lbs., length 36 inches over all. 9/6 each.

Rd. 468878.

BARR'S BULB AND POTATO DIBBER.

Barr's Special Bulb Trowel, made of best steel, specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

New Pattern Daffodil Hoe, a very useful tool for breaking the surface soil in the Flower Border during dry weather, and especially in early spring when Daffodils are just showing; also a useful weeding tool. With 3 ft. handle (41 inches over all, and weight under 1 lb.) 1/9 each, with short handle (12½ inches), 1/3 each.

DAFFODIL COLOURED AND UNCOLOURED PLATES.

These Daffodil Plates can be had, post free, at the following charges:—

- (1) Two large Uncoloured Illustrations, one representing a group of Yellow Trumpet Daffodils, and the other a group of White Trumpet Daffodils, drawn and arranged for the "Gardener's Chronicle" by Agnes Barr. The two Plates for 1s.
- (2) Coloured Plate of a group of Daffodils, including *Cernuus pulcher*, *Johnstoni* Queen of Spain, *Bicolor* J. B. M. Camm, *Leedsii*, and *Nelsoni* varieties, etc. 6d.
- (3) Coloured Plate of a group of Daffodils, including *Barrii conspicuus*, *Triandrus albus*, *Leedsii* Mrs. Langtry, *Bicolor* J. B. M. Camm, *Johnstoni* Queen of Spain, *Cyclamineus*, and *Minimus*. 6d.
- (4) Coloured Plate of a group of Daffodil Queen of Spain. 6d.
- (5) Coloured Plate of Daffodil *Incomparabilis* Sir Watkin. 6d.
- (6) Coloured Plate of Daffodils *Madame de Graaff* and *Apricot*. 6d.
- (7) Coloured Plate of Daffodils *Weardale Perfection*, *Monarch*, and *Lulworth*. 6d.
- (8) Coloured Plate of Daffodils *Barrii Conspicuous*, *Glory of Leiden*, *Queen of Spain*, *Victoria*. 6d.

A COMPLETE SET OF THE ABOVE PLATES SENT, POST PAID, FOR 3s. 6d.

Good Water-colour Paintings of any Daffodils can be supplied (to order) during the Daffodil flowering season at the rate of 10s. 6d. per bloom; Wash Drawings in black and white, 7s. 6d. per bloom. Orders should be given early.

John Parkinson's "Paradisi in Sole Paradisus Terrestris,"

"or A Garden of all sorts of pleasant flowers which our English ayre will permit to be nourished up: with A Kitchen garden of all manner of herbes, rootes, & fruites, for meate or sause used with us, and An Orchard of all sorte of fruitbearing Trees and Shrubbes fit for our Land together With the right ordering, planting & preserving of them and their uses & vertues, Collected by John Parkinson, Apothecary of London, 1629." Faithfully reprinted from the Edition of 1629; a delightfully written, interesting old book. £2 2s.

DAFFODIL NOTICES.

Naming Daffodils.—Cut specimens of Daffodils we undertake to name correctly, at the charge of 4d. each, 2s. per dozen, to cover attendant expenses. Address all cut specimens to be named, accompanied by a remittance, to our Nurseries, Surbiton, Surrey.

Daffodil Prizes.—Particulars of Competitions, Spring 1907, for Barr's Silver Daffodil Vases, will be sent on application.

Special Notices and Terms of Business.

FREE CARRIAGE OF BULBS.

All Orders for Bulbs to value £1 and upwards sent **Carriage Paid** to any Railway Station in the United Kingdom.

Prepaid Orders for Bulbs to value 10s. and upwards sent **Carriage Paid** to any Railway Station in the United Kingdom.

5% Cash Discount on Bulb Orders of 20s. and upwards.—1s. in the £ discount is allowed for Cash with Order (*with exception of the Special Collections offered on pages 6 and 7, which are strictly nett*), and this may be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the Order. The same discount may also be deducted from all Bulb accounts of 20s. and upwards when paid within 14 days from date of invoice (*excepting Collections offered on pages 6 and 7, which are strictly nett*).

Terms of Credit.—Our books are made up at Christmas and Midsummer, when all accounts are due nett.

Remittances.—Money Orders and Postal Orders should be made payable at Bedford Street Post Office; these and all Cheques should be crossed "London and County Bank." Small amounts may be remitted in Postage Stamps or Coin, in a Registered Letter.

Packages.—Boxes, Bags, etc., are charged at cost price, but these may be deducted from our account if returned Carriage Paid within a fortnight. *Returned empties should have the sender's name on the address label for identification, and an advice sent by post, stating date of despatch and name of Railway Co*

Catalogues.—Our **Seed Guide** is published in January, **Descriptive Catalogue of Bulbs and Tubers for Winter and Spring Planting** in January, **Hardy Plant Catalogue** 1st of March, **Daffodil and General Bulb Catalogues** in August. We are always pleased to forward any of these Catalogues, free of charge, to friends of our Customers on receipt of a line requesting us to do so.

Our Surbiton Nurseries.—Visitors invited during Spring to see our magnificent collections of Daffodils and Tulips in bloom. The Nurseries are situated less than a mile from **Surbiton Station** on the London and South-Western Railway. Cabs are always to be had at Surbiton Station.

Gardeners.—We keep a special Register of Gardeners in want of situations, and shall be pleased to put such in communication with any of our Customers requiring Head Gardeners.

Notices to our Foreign and Colonial Correspondents.

Prepayment necessary.—Owing to the difficulty of collecting accounts abroad, we beg that Customers will kindly enclose with their Orders *a remittance, a draft, or an "order to pay,"* on a London Bank, or Agent; the remittance should be sufficient to cover cost of carriage when the freight is required to be paid in advance.

Cash Discount 5%.—In the case of Prepaid Orders we allow a discount of 1s. in the £ from the amount of Seeds or Bulbs ordered, which may either be deducted by the Customer when remitting, or if this is not done, a liberal equivalent in goods will be added to the order.

Carriage.—No allowance for Carriage can be made in the case of Foreign Orders; the extra attention necessary precludes any kind of allowance in this respect.

Packing.—A moderate charge will be made where special materials have to be used, such as Sphagnum Moss, Oil-silk, or hermetically sealed tin cases, and where any special packing necessitates a great deal of labour (as in the case of some Plant Orders), when out-of-pocket expenses only will be charged.

Parcel Post Rates.—AUSTRALIAN COMMONWEALTH : 6d. per lb. (1s. for the first lb.).

NEW ZEALAND : under 3 lb. 1s. ; 7 lb. 2s. ; 11 lb. 3s.

TASMANIA : 6d. per lb. (1s. first lb.).

CAPE COLONY and NATAL : 9d. per lb. TRANSVAAL : 1s. per lb.

INDIA : 3 lb. for 1s. ; 7 lb. for 2s. ; 11 lb. for 3s.

CANADA : 6d. per lb. (8d. for the first lb.).

CHINA : 3 lb. 1s. ; 7 lb. 2s. ; 11 lb. 3s.

JAPAN : 3 lb. 1s. 10d. ; 7 lb. 3s. 6d. ; 11 lb. 5s. 2d.

UNITED STATES of America (*Official Service*) : 2s. for each parcel not exceeding 4 lb. 6 oz. in weight.

Shipping, etc.—In Shipping Bulbs and Plants to Australia, New Zealand, America, India, and the Cape, we exercise great care in selecting, preparing, and properly packing the same. Still there are so many contingencies that we cannot, in any way, hold ourselves responsible for the condition in which Plants or Bulbs reach their destination. *Our Customers will confer a favour if they report, on arrival, the condition of the goods.* Our experience in successfully preparing and shipping Seeds, Bulbs, and Plants to India and the Colonies extends over a long period.
